Intro

You are to replicate and extend one of the three classic games, that you have a `.c` file as reference to get started.

Remember all our learnings in the warm-up group replicate. You are not to follow the `.c` literally but apply what we have studied, be critical and pay attention to performance.

Base Game

You are required to implement a fully contained game, that includes

- title splash-screen, instruction screen and all the necessary screens,
- score mechanism and display,
- smooth game-play,
- sprites, animation that go with your narrative and overall appearance,
- debug, pause and dev keys that help the development, and
- music/sound

Extended Game

You are required to add one or two game mechanisms depending of your game. More to come.

Planning to fill

Your name: _____

List each small problem you see you will need to solve as you go through the first read of the reference.
